Getting Started

# Unlock Jenkins

To ensure Jenkins is securely set up by the administrator, a password has been written to the log ([not sure where to find it?](#)) and this file on the server:

```
/var/lib/jenkins/secrets/initialAdminPassword
```

Please copy the password from either location and paste it below.

Administrator password

Continue

```
[root@ip-172-31-34-85 ~]# systemctl status jenkins

Jenkins 2.414.1

## Getting Started

# Instance Configuration

Jenkins URL:

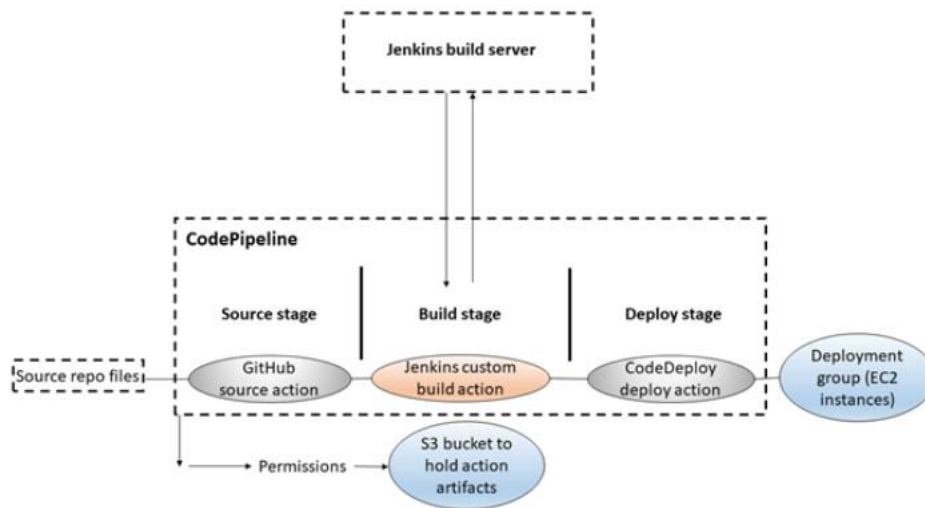

http://54.165.136.182:8080/

The Jenkins URL is used to provide the root URL for absolute links to various Jenkins resources. That means this value is required for proper operation of many Jenkins features including email notifications, PR status updates, and the `BUILD_URL` environment variable provided to build steps.

The proposed default value shown is **not saved yet** and is generated from the current request, if possible. The best practice is to set this value to the URL that users are expected to use. This will avoid confusion when sharing or viewing links.

Jenkins 2.414.1

with these permissions:

✓ Read access to issues and metadata

✓ Read and write access to administration, code, commit statuses, and pull requests

Install

Cancel

Next: you'll be directed to the GitHub App's site to complete setup.

## Source provider

This is where you stored your input artifacts for your pipeline. Choose the provider and then provide the connection details.

GitHub (Version 2) ▼

### New GitHub version 2 (app-based) action

To add a GitHub version 2 action in CodePipeline, you create a connection, which uses GitHub Apps to access your repository. Use the options below to choose an existing connection or create a new one. [Learn more](#)

## Connection

Choose an existing connection that you have already configured, or create a new one and then return to this task.

arn:aws:codestar-connections:us-east-1:537465803738:connection/c71e05c1 X

or

**Connect to GitHub**

### Ready to connect

Your GitHub connection is ready for use.

Add Jenkins ▼

Use the template below to connect a Jenkins instance as a build provider for pipelines in your AWS account. Before you connect your Jenkins instance, you should set up the AWS CodePipeline Plugin for Jenkins and configure it for your project. [Learn more](#)

#### Provider name

Enter the provider name you configured in the Jenkins plugin

JenkinsBuild

This name must match the name configured in the plugin.

#### Server URL

Enter the URL for your Jenkins server

http://54.165.136.182:8080/

#### Project name

Enter the name of the project you created in the Jenkins plugin

Jenkinsforcodepipeline
